

Student Retention

SEAtS Software the student success platform provides universities, schools & colleges the opportunity to capture student engagement with a focus on student retention.

Student retention is one of the most important issues facing modern higher education today. SEAtS Software provides a cloud based solution that captures real time data in order to help universities, colleges and institutions to tackle retention issues and maximise student completion.

Key Benefits

Enhance Reputation through Better Retention & Achievement

SEAtS will alert both academic and administrative staff to potential course disengagement early in the cycle. Early informed intervention by tutors is proven to improve student retention and performance and reduce course abandonment. Research has shown that engagement and attendance monitoring identifies students most in need of support and enables university staff to intervene to improve the chances of a student's successful course completion.

Increase Student Retention

SEAtS Software provides a unified campus-wide dashboard that unifies all available data and gives leaders and academic support and welfare professionals the actionable insights they need to trigger outreach and critical early intervention strategies that improve student outcomes and address issues before they become embedded.

SEAtS early warning systems tracks key performance and attrition and alerts staff to at-risk students. SEAtS rules-driven models alert to tolerance breaches and create and assign calls to actions to the appropriate staff member and to the at-risk student as appropriate.

Early Warning Systems

SEAtS EWS alerts everyone involved through email and SMS that action is required. It signals those invaluable early calls to action that identifies problems and trends early on an individual or course basis.

Profile, monitor and be pro-active with smart-lists of at-risk students

SEAtS Software as a service Student Success Platform can be switched on from the first day of your contract. Your institution will benefit instantly from rules based analytical data models driven by verified audited data streams harvested from your existing campus systems. When you collect enough historic data these models can be trained on your historic data to create refine predictive profiles of potential at-risk students.

SEAtS collates this data into a single repository which can be further enriched by attendance and engagement data streams as well as socio-demographic and historic attainment data where available.

About SEAtS Software

SEAtS sets a new benchmark for student success with advanced early warning systems, work flows, dashboards, reports and analytics.

What SEAtS can deliver for your institution:

- Retain students through critical early informed interventions.
- Increase completion through better analytical insights into progression.
- Enhance reputation through improved student satisfaction and outcomes.
- Enhance resource and space utilisation with instant analytics.

How it Works

SEAtS works by sitting above and drawing information from whatever student record, timetabling and other systems you have in place. We do not look to change what you have simply to add value.

SEAtS Software provides:

- Early Warning Systems.
- Cloud Based.
- Real Time Data.
- Increased Completion.
- Enhanced Reputation.
